

# Circularity at Mondi

## Our Path to Circularity Scorecard (sustainable end-of-life)

Paper	Plastic
<p><b>Recyclable:</b> &gt;80% paper content<sup>a</sup></p> <p><b>Unacceptable<sup>b</sup>:</b> PVDC, wax coating, aluminium foil, adhesives which plasticise, permanent wet strength, two-sided silicon or PO polymer coating</p>	<p><b>Recyclable:</b> &gt;80% PE or PP (mono-materials), PO (mixed PE and PP)</p> <p><b>Unacceptable<sup>b</sup>:</b> PVC, PVDC, PET<sup>c</sup>, PA, aluminium foil, biodegradables</p> <p><b>Unacceptable above 5%<sup>b</sup>:</b> other polymers (EVOH, PVOH, acrylic, etc.)</p>
<p>Verified in accordance with accepted standards for home or industrial compostability (e.g. EN13432)</p>	<p>Verified in accordance with accepted standards for home and industrial compostability (e.g. EN13432)</p>
<p>Solutions designed for reuse for the same purpose as initially conceived</p>	<p>Solutions designed for reuse for the same purpose as initially conceived</p>

When designed for separation, all packaging components must comply with the following criteria:

- Paper content includes fibre, fillers and binders.
- Unacceptable unless proven recyclable through testing.
- Unacceptable as co-material with polyolefins.
